

# Determinants of HIV

M. Moellenkamp and N. Rosenberg

December 4th, 2014

# Presentation Outline

- Research Question & Motivation
- Theoretical Framework
- Methodology
- Descriptive Statistics
- Findings
- Conclusion & Limitations

# Research Question & Motivation

**Research Question: Are community level factors significant determinants of HIV/AIDS incidence rates?**

- ① Understand why some countries failed to achieve MDG 6A
  - *MDG 6: “Combat HIV/AIDS, Malaria and other diseases”*
  - *Target 6A: “Have halted by 2015 and begun to reverse the spread of HIV/AIDS”*
- ② Explore disease-specific determinants of health

# Theoretical Framework - Determinants of Health

# Methodology

## Model

$$I_{it} = \beta_0 + \beta_1 SE_{it} + \beta_2 WLC_{it} + \beta_3 SCN_{it} + \beta_4 ILF_{it} + \epsilon_{it}$$

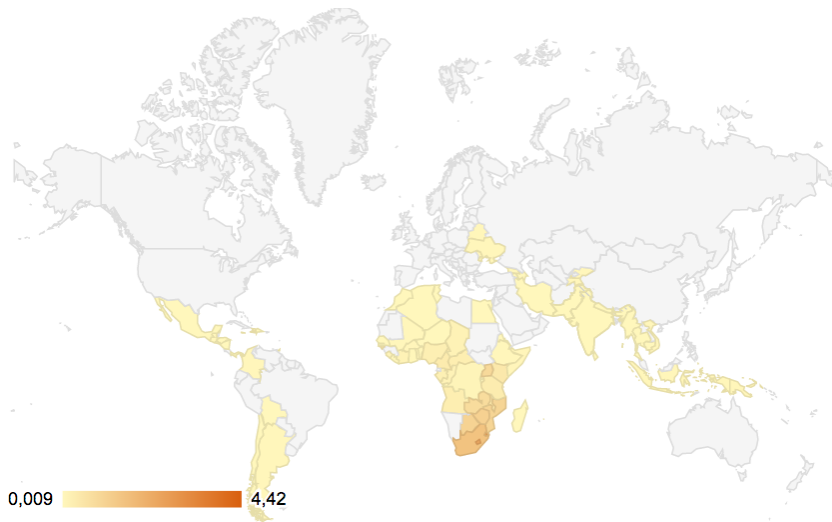

## Datasets

- We will use the World Development Indicators (WDI) for the independent variables and a dataset from UNAIDS for the HIV/AIDS prevalence rate.

## Methodology

- Model 1: Logistic Regression & Predicted Probabilities
- Model 2: Pooled OLS Regression & Fixed Effects

# Distribution of HIV Incidence Rates

# HIV Incidence Rates over Time

# Case Studies

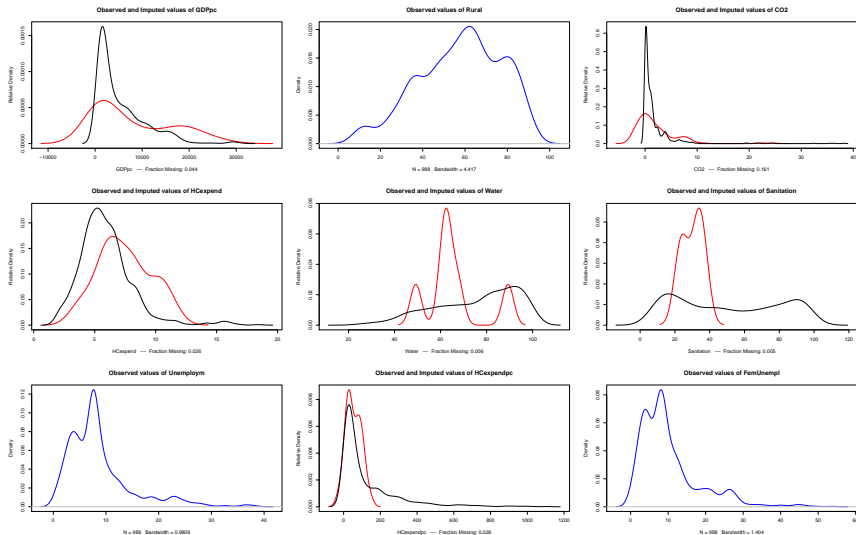

# Female Schooling in Selected Countries

# Female Unemployment in Selected Countries

# Imputed Missing Values

# Logistic Regression Results - Model 1

	Value	Std. Error	t-stat	p-value

# Conclusions & Limitations - Model 1

## 1 Logistic Regression Results of Model 1 (all countries)

- Generally in line with hypothesis
- Most of the variables are statistically significant
- Only Immunisation Variables and GDP per capital are not significant

## 2 Predicted Probabilities of Model 1 (selected countries)

- Direction of effect of Female School Enrollment matches initial assumptions for all case studies
- Direction of effect of Female Unemployment does not match initial assumptions for any case study

## Conclusions & Limitations - Model 2

- ③ **Linear Regression of Model 2 (countries with incidence above mean)**
  - Significance of some variables changes
  - Female School Enrollment and Female Unemployment remain highly significant
  - Effect of Female Schooling becomes positive (!)
- ④ **Fixed Effects Regression of Model 2 (countries with incidence above mean)**
  - Significance of some variables changes compared to simple linear model
  - Female School Enrollment and Female Unemployment become insignificant
  - Immunisation rates for DPT & Measles become highly significant (!)
